DAM 9					
DAM 10					
Any other comment?					

What fish species of fish occur in the dam?

Nr of Grass Carp required.

Recommendation and quote please (X)

We are specialists in the breeding and application of sterile Chinese grass carp (*Ctenopharyngodon idella*) for the control of aquatic weeds in dams and water ways. With 20 years of experience in the application of sterile grass carp, we are involved in numerous projects and estate developments. We consult clients on a wide range of practical application models and the development of dams into angling destinations for the eco-tourism market.

Fish orders is accompanied by the necessary sterility certification and permits as required by the various Provincial Authorities.

**De Rust is the leading authority on Grass Carp in Africa.
Please feel free to contact De Rust for any further information.**

We trust that you will be able to make use of our professional services
